

M.H. DE YOUNG MEMORIAL MUSEUM SAN FRANCISCO, CALIFORNIA

This 340,000 sq.ft. \$135 Million New Museum construction in Golden Gate Park is San Francisco's largest Public Arts Institution. This unique design makes this building the largest copper clad building ever built in the world. CEL is providing all required materials testing and special inspections for the massive project, including reinforced concrete, post-tension concrete, structural steel shop and field welding, and non-destructive testing. Base isolator installation and measurement and installation of viscous dampeners were a unique part of our scope of services.
