

PORT OF OAKLAND ON-CALL SERVICES OAKLAND, CALIFORNIA

Since 1988, Consolidated Engineering Laboratories has been awarded continuous on-call contracts to provide the Port of Oakland with inspection and testing services for all ongoing construction. The projects have included new construction and repairs involving utilities and roadway relocations, the new Amtrak Station and 5-story parking structure at Jack London Square, berth renovations and repairs, complex soil dikes, taxiway and runway reconstruction and modernization and airport terminal expansion. CEL is particularly proud of the work we performed at the Oakland International Airport following the Loma Prieta earthquake, at which time our field and laboratory personnel worked around the clock for 10 days to reopen the damaged runways. In addition, CEL has provided full-time Resident Inspectors during peak construction cycles, some as long as two to three years, to accommodate the Port of Oakland's construction department. Our scope of testing and inspection services has encompassed all aspects of the Port's construction.

Client:	Port of Oakland Hope Samaras – (510) 627-1473
Architect:	Various
Structural Engineer:	Various
General Contractor:	Various
Duration:	1986 – Ongoing
Construction Costs:	Over \$600 Million
CEL Fees:	\$3.8 Thousand
